

Question 1

Show a multi-level concept map integrating: Operating System Types → OS Structures → System Calls → OS Functions. Your map must show cross-links (e.g., how OS structure influences system call implementation).

Legend: solid = main flow | red = structure influences syscall implementation | blue = OS type influences syscalls | purple = function cross-link

Question 2

Construct a comprehensive concept map representing: Process Management, Memory Management, File System, and I/O System. Include interdependencies and indicate where system calls interact with each component.

Question 3

Sketch a comparative concept map for: Batch OS, Time-Sharing OS, Distributed OS, and Real-Time OS. Highlight differences, similarities, advantages, and limitations using linking phrases.

Question 4

Illustrate a dynamic concept map showing the execution flow: User Program → API → System Call Interface → Kernel → Hardware → Response back to User. Include feedback loops and control flow paths.

Question 5

Sketch a hierarchical + functional concept map for system calls: Process, File, Device, and Information system calls. Also show how they relate to OS services like scheduling, memory allocation, and device handling.
